

## **Bar-Tec® Valeo**

The combination of slot width accuracy, strength and durability for OCC applications

# Bar-Tec® Valeo

## The most stable screen basket for demanding OCC applications

### Benefits

- **Ultimate level of stability compared to conventional screen baskets**
- **Reliable screen runnability**
- **High screening efficiency**
- **Able to handle process upsets**
- **Additional screening capacity**

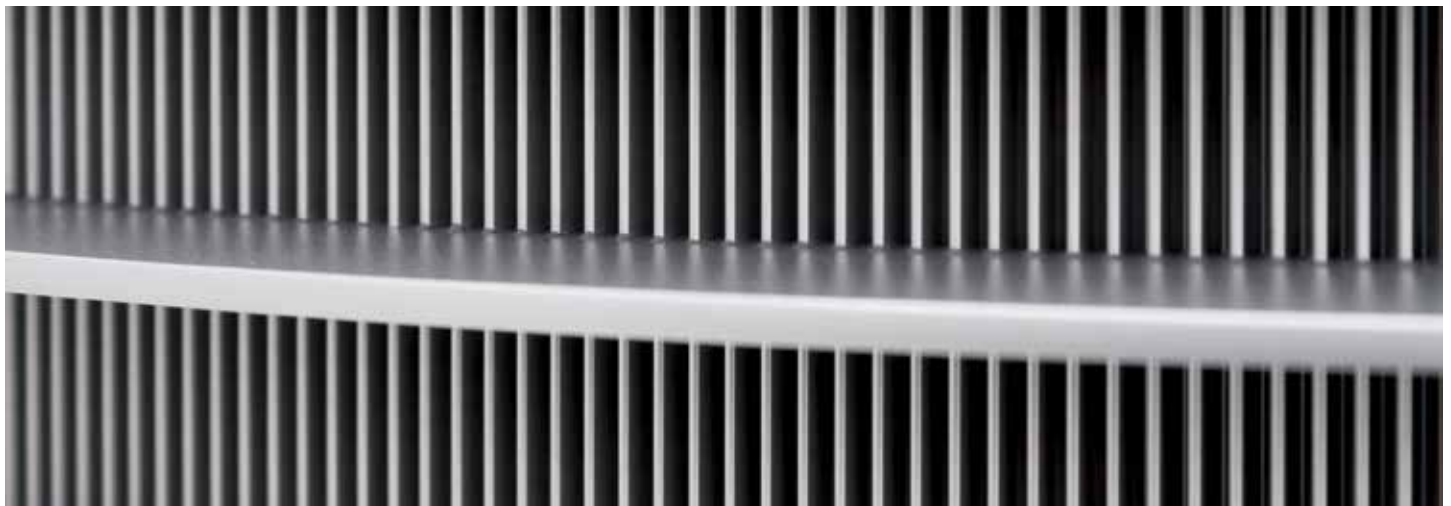

Bar-Tec® Valeo is the next generation of screen basket technology for pressurized screens. The processing of OCC places heavy demands on a screening system. With conventional wedgewire screen baskets, the individual wires can be like blades of grass in a windstorm – changing shape or breaking, and vibrating with the high wind flows.

Not so with the Bar-Tec® Valeo basket. Its unique stability is the product of advanced state-of-the-art manufacturing: no welding, clamping, rolling, or cage required.

The result? Maximum performance, maximum efficiency, and long life. Don't bend to the pressures of inferior baskets.

### Features

- **Optimum profile wire joint**
- **Highest slot width accuracy**
- **Excellent strength and durability**
- **No slot distortion**
- **Perfect slot width accuracy**
- **Full profile wire bonding**
- **No welding, clamping, rolling, or cage required**
